RESEARCH INTERESTS

My research interests range across urban planning, and urban, political and economic geography. I have published widely on urban desegregation in South Africa and the US, including papers that are based on comparative analysis of the two countries. I have also worked on economic development issues, including policy related to using science and technology centers and empowerment zones (in New Jersey) as development tools. My current research is on the impact of illegal migration on suburban communities in Long Island and New Jersey and also on the effect of declining manufacturing employment on suburban communities in New Jersey.
